

## COSC 3380 – Design of Database Systems – Spring Semester 2022

### Tuesday-Thursday Section (18684)

Please review each of your team members, including yourself.

Email completed review form to Dr. Uma Ramamurthy ([uramamur@bcm.edu](mailto:uramamur@bcm.edu))

Team #: \_\_\_\_3\_\_\_\_

Reviewed by: \_\_\_\_Bryan Smith\_\_\_\_

**Team Member-1** Name: \_\_\_\_Hennig Santiago\_\_\_\_

a. Completed Tasks:

Worked a lot on listener and musician functionality, especially on playlists and song favoriting. As well as a number of get and post routes for these accounts

b. Comments:

Santiago was hugely important for the listener and musician account types. He worked a lot directly with Seth on creating and implementing their functionality. And tackled some pretty tough problems such as interacting with our many to many relationships in the database through code to implement playlists.

c. Review score (1 to 5 – 1 is poor and 5 is best): 5

-----

**Team Member-2** Name: \_\_\_\_Daniel Amran\_\_\_\_

a. Completed Tasks:

Complete database admin and responsible for controlling schema. Implemented all of our triggers and worked with us on properly querying the database from the application side

b. Comments:

Daniel was very helpful, he was always looking for something to work on and improve with our database and its functionality and schema. Having him in charge of building and managing the database was very helpful in allowing us to focus on working efficiently and not getting bogged down.

c. Review score (1 to 5 – 1 is poor and 5 is best): 5

**Team Member-3** Name: \_\_\_\_Seth Leake\_\_\_\_

a. Completed Tasks:

Worked on the listener and musician user accounts with Santiago. He also built the music player as well as musician functionality and the song searching. And of course get and post routes as well.

b. Comments:

Seth was responsible for a ton of the feature implementation, especially on the listener and musician accounts and really put that polish on our app that made it not only functional but also feature-full.

c. Review score (1 to 5 – 1 is poor and 5 is best): 5

-----

**Team Member-4** Name: \_\_\_\_Caroline Gleici\_\_\_\_\_

a. Completed Tasks:

Complete front end UI/UX design, helped a lot with the get/post routes as well as the admin reports and generally formatting all of the information from the database.

b. Comments:

Caroline's experience and knowledge with the frontend design was super helpful, our project wouldn't have looked 1/10 as good without her. And she was a very hard worker, always getting the frontend done in a timely manner such that we could move forward with backend implementation.

c. Review score (1 to 5 – 1 is poor and 5 is best): 5

**Team Member-5** Name: \_\_\_\_Bryan Smith\_\_\_\_\_

a. Completed Tasks:

I implemented the app infrastructure, user authentication, and the admin dashboard with data entry, reports, and queries. I was also responsible for a number of get and post routes. As well as hosting the website and database

b. Comments:

This was my first time as a team leader in CS and I couldn't have asked for a better team. Everyone was really involved in the project from talking about it, to design, to implementation and bugfixing. We all had our own individual roles that we primarily

worked on but we were all constantly talking and helping with any issues that arose.

I really feel that everyone contributed a lot to this project and I'm grateful that we had this opportunity to learn as a team.

c. Review score (1 to 5 – 1 is poor and 5 is best): 5
